

SHOTGUNNING AND SURFACE PREPARATION

AUTOMATION SAFETY

Limit exposure to High Pressure Stream

- Manufacturer's safety devices and guards must be in place
- Never exceed the operational limits of the equipment (e.g., backthrust limits)
- Higher volume may require a larger barricaded area and/or physical barriers

Operator Training

- Ensure operator can safely control the articulating nozzle and keep it directed within a safe range

SHOTGUNNING AND SURFACE PREPARATION

CHECKLIST (Automation)

- ☐ All team members must understand and practice hand signals for “Turn on Water”, “Pressure Up/OK to begin blasting”, and “Cut Pressure”

Staging Equipment

- ☐ Properly position/barricade automated tool
- ☐ Position controls a safe distance from the blast zone, maintaining line of sight to the tool/target

Initiates Pressure Up

- ☐ Demonstrate **proper hand signals**
- ☐ Controls dump until desired pressure is attained (may need to pressure up in stages for high volume operations)
- ☐ Tests dump valve before starting to work

Safe Operation

- ☐ Maintain effective standoff distance
- ☐ Cleans in small (12”-18”) sections
- ☐ Maintains proper, safe operational envelope (HP water is directed within a safe zone towards the target)

System Pressure Down

- ☐ Demonstrate **proper hand signals**
- ☐ Maintains control of equipment until pump is shut down
