

TUBE CLEANING

CHECKLIST (Automated)

All team members must understand and practice hand signals for “Turn on Water”, “Pressure Up/OK to begin blasting”, and “Cut Pressure”

Indexer / Positioner Setup

- Proper mechanical attachment to tubesheet/channel head/scaffold
- For multi-lance operations, demonstrate matching guide tubes with exchanger pitch
- Installation of guide tube assembly within 1” or less of tubesheet
- Demonstrates ability to match proper sized AWD collet with lance

Lance Drive Installation

- Demonstrate proper installation of lance drive to indexer/positioner
- Demonstrate proper procedure for loading lance(s)
- Demonstrate proper installation of AWD collet
- Proper connection of control hoses (routed to minimize trip hazards and contamination with hazardous materials)

Control Panel Operations

- Positions controls away from high pressure waterjet and hazardous material from exchanger, maintaining clear line of sight to guide tube(s)
- Proper connection and directional confirmation of control hoses / panel
- Proper connection and ease of access of dump valve

TUBE CLEANING

CHECKLIST (Automated) – CONT.

Control Panel Operation (cont.)

Proper installation of lance(s) to dump valve

Proper operation of indexing functions

Initiates Pressure Up

Demonstrative in use of proper hand signals

Demonstrates proper installation of hose stops to prevent nozzle exiting the far end of the tube

Keeps dump valve activated until proper pressure is attained

Tests dump valve before starting to work

Demonstrates proper operation including speed adjustment

Demonstrates ability to properly cycle the lances through multiple tubes

System Pressure Down

Demonstrative in use of proper hand signal

Maintains control of equipment until pump is shut down
