

SHOTGUNNING AND SURFACE PREPARATION

CHECKLIST (Manual)

All team members must understand and practice hand signals for “Turn on Water”, “Pressure Up/OK to begin blasting”, and “Cut Pressure”

Pressuring the System

Demonstrate **proper hand signals**

Secure, or “Lock Down” the gun barrel under a pipe or structure until working pressure is attained

Maintain pressure on the trigger until pump pressure has been set by the pump operator

Test the dump valve before starting shotgunning work

Safe Shotgun Operation

Utilize appropriate shotgun length and approved hose shroud whenever you’re shotgunning

Use and maintain a **correct shotgunning stance** – legs spread shoulder width apart and slightly staggered

Control the gun using torso mass and the large muscles in the lower body

Use body weight to counteract the back thrust of the gun – lean into the gun as thrust increases, lean back off the gun as thrust decreases

Ensure proper placement of the whip hose and control the whip hose during operation

Maintain proper trigger pressure – the dump valve should not be leaking

Maintain standoff distance and jet angle to effectively remove the material

Clean the surface in small sections, approximately one 12”-18” square at a time

SHOTGUNNING AND SURFACE PREPARATION

CHECKLIST (Manual) – CONT.

System Pressure Down

Release trigger to dump pressure

Signal pump operator to shut down pump, maintaining line of sight with pump operator

Maintain control of the gun – do not leave the gun unattended until the pump is completely shut down
